relevant. Reading resources will always be up to date and reflect all those changes. In the process of developing your numeracy, analytical and presentation skills, there will be extensive exposure to real life problems and several units will require the use of technology, relevant software, and research approach teaching. The leading financial trading platform Reuters Eikon and the Econometrics software STATA will be taught and practiced in the computer lab sessions. Some of the work will have to be done individually to develop your ability to be creative and independent thinkers. The need for collaboration and team working in real work is also acknowledged and the relevant skills will be developed through team discussions during seminars and group assessments.

The final year Business project will enable students develop their abilities to conduct high quality academic enquiry, to identify questions that need to be addressed in both a professional and scientific way, to think critically when analysing, deduct when synthesizing, and to present your argument in a clear and concise manner as it is required for your success in this course but also as it will be expected by your future employers.
